

SURGERY

Comrade, you have the most important job aboard this submarine. Your job is to put your fellow Comrades together when they invariably fall apart, just like the submarine around you.

You have been provided with an advanced surgery kit in a colorful box marked Operation. It contains everything you need to perform surgery.

PREPARATION

Before you may perform surgery for the first time, you will need to set up Sick Bay. Inside the box, you will find a small bag with the white and green pieces used for the surgery mechanic. Place these pieces into the appropriate holes in the Operation Board also found in the box. You will have extra green pieces; leave them and the rubber bands in the bag.

Flip the switch on the Operation Board to the lightning bolt symbol and you are ready to go!

HEALING

To heal someone, you must remove pieces from the Operation board using the provided tweezers. You need to remove as many pieces from the board as the person has total Hit Points, regardless of how damaged they are. This will heal them to full. Do not replace the pieces in the board between surgeries. Keep them in the box instead.

For example, you need to perform surgery on someone who has 5 Hit Points and has lost 3, taking them down to 2 Hit Points. You need to remove **five (5)** pieces from the board because that is their total number of Hit Points.

If while removing pieces, you cause the buzzer and red light to go on, you may continue to remove the piece you are working on, but then your count resets. So if you get the fourth piece out successfully in the above example, but cause a buzzer on the fifth piece, then you may remove that piece and then you need to remove 5 more pieces because you have reset the count.

RESETTING THE BOARD

You may only put pieces back into the board after all the pieces have been removed from the board. You may not replace them at any other time, even between surgeries. Please do not lose pieces. We plan to run this several more times.

PRACTICE

You are welcome to practice surgery during your down times. However, you may not return pieces to the board unless you have removed them all, as specified above.
